

**NEW FEATURES.
EXCLUSIVE CAPABILITIES.**

NEW!

FULL SURFACE HOLE SCANNING

For the first time, the EVⁱ enables previously unattainable bolt-hole inspections of complex layers. By scanning and imaging the full surface area under inspection, the EVⁱ display provides both scan data and graphic images of the actual surface in near-real-time as the inspection process proceeds. The EVⁱ's surface image gives inspection of bolt-holes in multi-layer and multi-material stack ups far greater clarity than ever before possible.

NEW!

HIGH SPEED SURFACE INSPECTION

Real-time condition of differential coils enables the EVⁱ to quantify the surface proximity of differential and absolute coils, thus enhancing and verifying the validity of inspections. Display colors depict shape and size of discontinuities, enabling operators to interpret signals at a glance.

NEW!

FLUSH RIVET SURFACE SCANNING

Because metal skins on aircraft structures are riveted or fastened in place, cracks can occur around and between rivets and fasteners. The EVⁱ's high-speed surface scanner speeds and improves this inspection process. A real-time image of the rivet or fastener is presented with cracks imaged if they are located near or between rivets, fasteners or under paint.

NEW!

**WELD SURFACE AND
INTERFACE SCANNING**

When equipped with the UniWest ECS-3S high-speed scanner, the EVⁱ's built-in, easy-to-read, display screen depicts real-time scanned images of surface cracks and other discontinuities in friction stir-welds and flush surface weldments. The scanned graphic images improve operator judgment in detecting and discerning surface flaws.

EVⁱ FEATURES

MULTIPLE DISPLAY MODES

- Multi/single frequency and channel view modes
- Surface imaging, Impedance Planes, Oscilloscopes, Strip Charts, and many combinations of plots available

DISPLAY/IMAGE INTEGRATION

- Conventional Impedance plane, A-scan or Strip Charts displayed alongside Surface Image Graphic

CONTROL VERSATILITY

Optionally controllable by either:

- Easy to use menu driven, on-screen controls or internal microprocessor via optional keyboard

REAL-TIME COUPLING FEEDBACK

- Real-time feedback of the coil to metal coupling condition

BROAD COMPATIBILITY

- Fully compatible with:
UniWest's eddy current array sensors
UniWest's ECS-3S surface-scanner
UniWest's ECS-5 hole-scanner
Compatible with many other probes and accessories

OPERATING PARAMETER RECOGNITION

Scanners and accessories are automatically recognized by the EVⁱ when connected. EVⁱ automatically configures parameters such as motor voltage and encoder resolution to match the scanner. Simple connect and scan operation.

FULL CONNECTIVITY

- The EVⁱ is connection-ready to virtually any digital resource, protocol, or peripheral via USB, Ethernet, VGA via USB adapter, USB/OTG, MULTI I/O, Analog X/Y or USB Keyboard

USER FRIENDLY DATA STORAGE AND RETRIEVAL

- Up to 300 data files can be saved for subsequent review, storage, retrieval, post-inspection analysis and report generation
- EVⁱ data may be stored in the form of instrument setups, inspection reports, image bitmaps, or scan data files

EASY DATA EXPORTS

- All scan and report data is fully exportable via USB or Ethernet

INTRODUCING
**The New World Standard for
Eddy Current Testing**

FROM

Tough Challenges. Critical Solutions.

THE MOST ADVANCED PORTABLE ECT SYSTEM EVER DEVELOPED

PRECISE. CLEAR. RELIABLE. ADAPTABLE.

Detection Perfection!

NEW FROM UNIWEST.

UniWest provides critical solutions for non-destructive testing.

UNIWEST EVⁱ - OPTIMIZING THE INCOMPARABLE PRECISION OF UNIWEST FLAW DETECTION WITH THE POWER OF SURFACE IMAGING

For three decades UniWest eddy current testing systems have set the world standard of excellence for non-destructive inspection of safety-critical and high performance metallic components.

In keeping with our tradition of continuously improving the accuracy and efficiency of the non-destructive inspection process, UniWest's EC Solutions Team has developed the most technically advanced and operator-friendly portable eddy current testing system ever offered — the EVⁱ.

Engineered by the UniWest EC solutions team, and manufactured in the United States, the new EVⁱ works directly with the EddyView Family of probes and accessories. UniWest's unmatched array of standard and optional signal processing, readout, data storage, alarm and display features set a new standard for flexibility of applications, ease of use, interpretation of data and overall operator accuracy than ever before possible in a portable NDI system.

The key to the EVⁱ's ground-breaking performance is the display of a previously unavailable visual image of the surface area under inspection alongside the customary eddy current signal displays in the form of impedance plane, A-scan or strip chart displays.

All in all, the EVⁱ provides a high precision, easily readable, visually accessible account of surface conditions which enable greater operator accuracy, improved interpretation of data, and more accurate discernment of cracks, pits, gouges and fretting.

By merging innovative surface imaging with UniWest's renowned, best-in-class signal to noise and surface imaging technology, the EVⁱ system sets a new world standard of precision for eddy current testing in a portable and easy to use package.

The Proof is in the Imaging!

Advanced bolt hole scan

Subsurface flaw from steel fastener

Aluminum fasteners under paint

Flaw between steel fasteners

ACCESSORIES

In addition to being compatible with all UniWest accessories and many off-brand components, the EVⁱ offers a family of scanners designed to optimize system performance and leverage the system's imaging feature for maximum flaw detection and discernment.

ECS-5

The ECS-5 is UniWest's EVⁱ-compatible, hand-held bolt hole scanner. Ideal for rotary and linear scan-motion indexing, the ECS-5 supports both absolute and differential coil types in both reflection and bridge configurations. This scanner provides 3 mil to 30 mil scan resolution in 1 mil increments. Variable rotation from 500 to 3000 RPM is adjustable in 10 RPM steps at constant torque throughout the speed range.

ECS-3S

Ergonomically designed for comfortable handling and rapid inspection of small and hard to reach areas, the handheld, portable ECS-3S scanner provides a constant, high-speed scan of the surface. Capable of covering areas as small as 3/4 inch, the ECS-3S's contour-following sensor assembly allows inspection of variable surface gradients. The ECS-3S improves flaw discernment for previously inaccessible remote and obscure surface areas.

EVⁱ ADVANTAGES

- Only Portable System of its Kind
- Coupling Condition of Absolute and Differential Coils
- Visual Confirmation of Surface Anomalies
- Superior Probability of Detection
- High Resolution Real-Time Surface Imaging
- High Speed Scanning
- Real-Time Coil Coupling Condition
- Multi-Layer Stack ups Imaging
- Multi-Material Stack ups Imaging
- Full Surface Imaging Hole Inspection

INDUSTRY APPLICATIONS

- Aerospace
- Power Generation
- Industrial (High-End)
- Tube/Nuclear (Specialized Inspection)
- Research and Development
